DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on 8/17/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on Application Number 10/697,495 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

Claims 5-8 are allowed.

Claims 5-8 are allowable over the prior art of record, none of the prior art whether together singularly or in combination to teach the claimed combination as recited. The closest reference "Automatic Distortion Correction for Efficient Pulse Transmission" by Schreiner et al. does not disclose or suggest the improvement of the instant application comprises the step of selecting a first subset of predetermined set of values for sending to a controller of an emitter, the controller of the receiver evaluates the received signals for determining the subset corresponding to the best signal quality to send a request to the emitter's controller for setting the parameters of the determined subset, wherein the receiver including a sampler controlled by a phase rotator to characterize a digital eye by setting the phase rotator in a first position, XORing the sample shifted by 1 bit, ORing the XOR operation with partial result associated to phase rotator position, and repeating the steps of setting, XORing, and ORing for a second phase rotator position for combining the partial results associated to the first and second phase rotator position in adjusting parameters of the emitter of a synchronous high-speed transmission.

Schreiner et al. do not teach the steps of sampling above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
